THE MINING JOURNAL. Mailway and Commercial Clairite.

be calculated in the slightest degree to detract from the objects, or militate against those interests which we so heartily advocate; and we again call on all associated with or interested in mining—all those who powers the common feelings of humanity or philanthropy—to lead their hearty associance, and prove, that while other classes are protected, the miner is not forgotten.

The recent accident, attended by the loss of about fifty lives, at Landshipping Colliery (adverted to in another column), is of too late occurrence to justify us in effering any observations on the present occasion, while it asks a fearful addition to the list which it will be our date, on an early occasion, to lay before our readers.

It will be our duty, on an early occasion, to lay before our readers, on it being submitted to Parliament.

We last week briefly noticed the meeting held at Redruth with the view to the formation of a Practical Minors' Society, the details of which will be found in our columns of to day. We are glad to find that Cornwall is at last putting forward, if not its full at at least each a demonstration as will lead to the expectation that the Cornish people are beginning to think for themselves, and that the smelters and mine adventurers—the latter of whom are, after all, certainly the most interested parties—aviace a disposition to lead their aid in establishing a society which has for its object (so for as we should be led to suppose by its title) the advancement of the working misser. While we are ready to admit all this, and to advocate much more, we feel secured the latter will not and to advocate much mark, we see assured the inster will not find fault with me if we offer one or two passing observations, which may be said to apply in a manner not so favourable as, from our known disposition as the advocate of the working miner, might be expected; but, we must confess—we angur but little practical

good from the society.

It is not long sizes that Sir C. Lesson nobly came forward, and offered to place 16,000L, or even 20,000L, for the benefit of the practical miner, on certain conditions—this was rejected; the meanerge money, of a school of mines, whether emanating with the orthy mambar or others, was also rejected. The demose of the worthy meaning or others, was also rejected. The demise of the much lamented Lord de Dunevanville elected a public expression of foeling, and subscriptions to the amount of some thousands were raised; it was then proposed to erect a miner's hospital—this was again rejected; and, indeed, all measures, usual the present was proposeded, have been in like manner rejected by the mining interest of Cornwall—whether we look to the "lord," the miner, the mine

centager, the mere ant, or the smelter. We now, however, find that a Practical Minera' Society has been

We now, nowever, not that a Practical Atter's Society has been formed—at least, each the report tells us; but, we would ask, how, and by whom, has this been achieved?—Where are the funds?—What the terms of subscription?—Where the meetings of the society, and when to be bold? Those are questions that it could hardly be supposed would arise—yet such is the case. Again, what are the objects of the society? Two appears to be alvanced—one meeting to a state of the meeting of atoms continues, mostly to consider the meeting of atoms continues, mostly to the meeting of atoms continues. to impairs note the merits of stram angines, another to consider the host means of obtaining the funds and necessary support for a mining hospital - while we are led to understand that the or posed above of smelters, marchants, mining captains, and engineers, is to be a Practical Minera Society. We tailed the motives which influence these gentlemen, and the several branches to which we refer-but, when so are told that the objects of the society are to be confined to agent af mines, we are servy to say that it loses much of its value and increases in server to its value. mesch of its value and importance in our eyes. It may lead to some-thing, but the designation is had—it is calculated to mislead, and we think, altogether, the measure requires to be more strictly defined. If it be for the practical miner, and to be upheld by subscription, our mits is ready—but if it be, as one of the resolutions states, "that the said seriety consist of the following classes of persons—vis., the pursors, captains, and engineers of mines, topersons—vis., the pursors, captains, and engineers of minor, to-gether with more surgeous, and the engine reporters," in which it is to be assumed the institution is custimed, then we say, unbesi-tatingly, that a father only can be contemplated. Let us, however, for a moment, follow the resolutions. It appears, "each member, at his admission into the anciety, is to pay 2s. fid. subscription, for defraying the expenses of printing, elationery, postages, fac., such subscription being made annually, or whosever the funds of the so-ciety may require." We do annually, or whosever the funds of the so-ciety may require." We do annually, or whose we would sak, where is the subscription of the resolution—whole we would sak, where is the subscription of the chaircain, of the amoltors, the more appears, and others connected. chards, the miss agosts, the engineers, and others or chards, the miss agents, the engineers, and others connected? Many of these cases between members of the society by the rules they thousedone passed. Where, then, is the help they would affect? Is it by their subscriptions to No-they are not even allowed to cahastiful their so. S.d. per agents, or "whenever the funds of the society may register."

Let us advance to the next resolution, however, for we shall have

the a clery may require.

Let us advance to the next resolution, however, for we shall have more to say on the question one a fature occasion. The meetings of the society are, we are told, to be held periodically—"the time and place of such societies to be fixed at the previous one." We could have imagined a resolution of the society have commanded from a Milesian, but, covering, not from a Cornelmont. The Sider I de has stronge totions and modes of approximation, but one as vague, or preferry minundreatendable, we have not his upon for some time ..." periodical meetings, "sealment time or place, and 2s. 6d. exhousing periodical meetings," without time or place, and 2s. 6d. exhousing time per annum, or "whenever," required. It is, however, mily don to stain that the next (periodical) meeting will be held at

importance of any change which may tend to diminishing fatigue, but he is not the party who, as a member of the society, can be expected to apply his funds or devote his time to the object in view. Now come we to the most important, and, to us, the only valuable, result of the mosting—it being moved that a committee "be appointed to report to the next meeting on the practicability of execting a miners' hospital, the cost of the same, and the best mode by which such cost may be defrayed." We must confest, that, highly desirable as we believe such a measure to be, it will never be accomplished by the course haid down. With the command of some thousands of the Dz Dzwzyawyllas foud, how is it that the project of a miners' hospital fell to the ground? How is it that Mr. Micharl Williams and Capt Joseph Lyla (two members of the committee), with the other gentlemen with whom they are associated, do not at once put down their 100d to 500d, a piece as a starting point, and call on the lords and adventurers to assist? Does it require a committee of investigation to ascertain whether a Does it require a committee of investigation to ascertain whether a hospital is necessary for the sick or mamed?—we think not. Again, is it necessary to ascertain the best mode to raise the requisite capital, not only for its erection, but support?—again we say, No. The matter is too clear to admit of argument or doubt.

The matter is too clear to admit of argument or doubt. We doubt not but that the remarks we have been felt called upon to make, will elicit observations in certain quarters. Of this we should be glad—for, as our object is alone that of benefiting the practical or working miner, we shall be well content if we are either the means of exposing a scheme which cannot be practically useful or beneficial to him, or, on the other hand, of causing such explanation to be afforded as will ensure our support. We have our doubts—but we still cling to the anchor of hope.

It will be observed, by our share list, that the price of shares in the Santingo Mining Company is quoted at 7t., having been done within the past two years, if we mistake not, at 35t., and certainly within the past two years, if we mistake not, at 35L, and certainly quoted within the last three months at 25L; as well as obtaining the price of 15L even since the meeting. We do not hesitate to express our opinion that a panic has been evented, but by whom we are at a loss to guess, although, if we are right in our conjectures, as to the object, the latter cannot be mistaken. The company consists of 7000 shares, with 10L paid, or 70,000L, the dividends paid, amount, we believe, to 24L per share, or upwards of 160,000L; and the ores in hadd, in addition, to upwards of 20,000L - that making an avail. regital, as a reserve capital, as a reserve fund, to 30,0002, or 33,0002; and the ores in hald, in addition, to upwards of 20,0002—thus making an available capital, at the present moment, of some 60,0002. The law question with the Cobre Company—it being admitted that there is listle law or justice in the Spanish courts, except it is bought at a good figure—and the accounts received of a "alide" having interrupted the lode, are the reasons assigned. We think to these might be asided the proposed purchase of additional property, which would necessarily involve another call, the amount of which the share-holders have no grounds of calculating upon.

hothers have no grounds of calculating upon.

We and entered in our last Number that we had reason to believe Mr. Wallops, M.P., had taken up the subject of "Railway Reform." Our information present to be circuit, as will be seen from the following nation, entered by the how. Member on the minute-book of the House of Commont last Monday night:—"On the 29th test, to cell the strenting of the House to the existing state of railway communication throughout the blogdom, as shower in a panighbet suffiled Railway Reform, and more that a commission be appointed to inquire into the measurement of the present lines, and report thereon to the two Houses of Perliament." We shall look forward to the discussion in the House of Commons of this matter with meach interest. We are commissed to learn how the plan proposed by the author of Railway Reform will be received by how. Members. For our own part, we believe the forthcoming discussion will do good. Much injustice has been done to railway directors, and the most unweited aspeciators out upon their conduct not management, from which they will now have a fall apportunity of freeing themselves.

All that railway proportors want is fall and perfect justice; they desire to generas no privileges incommission with the welfare of their follow-subjects, but they have a right to domain that this and ample pastice be done them. If their property by interfered with. In the count time, we call on all Members of Parliament, who are either railway directors, or otherwise indeceased in railway property, to athend to the intervents of their compilities.

SMOKELESS STEAM COAL COMPANY.

The prespectus of a company under the above title has been imaged, in which it is stood that upon not means and enlocalations made, the met profits in the stood confeas we are accordingly upwards of 50 per cent, on the ultrace. We must confease we are accordingly upwards of 50 per cent, on the ultrace. We must confease to us to require some electivities. go Sanawick to hear their cratters, who advise peace and union / to insure spacess, and they apparated quicity.—Batteriey, Feb. 22.

PROPOSED PRACTICAL MINERS' SOCIETY.

From the results of the meeting at Andews' a Hotel, Reducth, on Tousday, the Jülk inst., which we briefly outleed in our last Number, we are disposed the Anger that a society will at length be catabilished, on a form and lasting basis, which shall place the working miner in a position of equality in the social ands with the other industrial classes. As alsy and positedly in the social ands with the other industrial classes. As alsy and positedly in the social ands with the other industrial classes. As alsy and positedly in the spiculturals, a seril themselve of the moral of that well known false of 'The old man, his sons, and the bandle of sticks'—while all other classes were combining for movel, president, and interferental improvement, by an eaghaing of ideas, and thus causing a conclusual stream of information, furtilizing the said on which society at large thrive-result size and successfully a limit of the confidence communicate any dissoveries he night make, no one with whome he cealed evolutions and dissoveries he night make, no one with whome he cealed evolutions of their was been distorted to prove the count of his inquiries, and no hanks to which he could write: his advantement in time-ledge was abov, if such it could be earlied—and he died; we he said freely without importing the attainment of every information of the miner common character as well as reconsidered, and receive that primer attention which circumstance days at their own (no aften) went of the successful there with means of historeomistic contents, in other promoters and long-receive that primer attention and literary and overtile societies, in all parts of the kingdom. He will be accorded to making, the desired nature of the parent, and the existence of accistry, it does appear strang, the with the isomeons and linerary and overtile societies, in all parts of the kingdo

or consignings; and the chairman, in specification, closerced, that he hoped to see a based of eacher formers, which, consistenting on their day, would be confraged in citize years, and stronglishmed by age.

Analyze as we can to do partice to the improvedance of the colpect, we have it eyemen in follow all the openings; andien it to any, bin greatest manifely powerfuled, and missenty at the aspectation of the expectation of the processing to search great was in appointment of communities, for the process of the disciplinary, for the process of the disciplinary of the process of the disciplinary of the process of the disciplinary of the control of the contro

MIMPROVEMENTS IN THE MANUFACTURE OF IRON.

AMPROVEMENTS IN THE MANUFACTURE OF IRON.

San,— * * Per the information of "Red Gountlet" and others, I may observe, that the iron made here by Clay's process is excessively red-short. He could not, of mourse, have expected me to depreciate the staple commodity of my neighbourhood, by prematurely condemning its quality, but, as I am crudibly informed the abandonment of the system, as at present practised, is under actual contemplation, the objection does not more apply.—In my next I shall give you my own analysis of the Beaufort or Nantygio black-hand, and also of that lately discovered at Eutow Vale, by Mr. John Adhano, minored agent thore. The former ranges from one med inch to four or five feet in thickness—the latter from seven to fourteen inches.—Nantygio, Fish. 17.

(We think our surrespondent will feel with us, that the serious display of

inches.—Nontypio, Feb. 17.

(We think one correspondent will feel with us, that the serious display of presented recrimination unfortunately account by letters on the subject of all legal and disputed obtains to recrime inspections in the similarities of ion, has already andered too long, and we now never correctly entrest the ceveral respected ourseapondents who have been fruitener energy outsets the condition themselves to the subject which originated the discussion—a development of the featured resources of their several districts, and the to-making to districts and the desired from the application and necessary makes in making inspections and improvements. "A Looker Ou's" promised communication will be implied for and of with pleasure.

ON THE EFFLUX OF GASEOUS PLUIDS UNDER PRESSURE. ON THE EFFLUX OF GANEOUS PLUIDS UNIDES. PRESSURE.

But, —It is beganned that I fill not see your publication for among weeks at the beginning of the year, and the Minday Journal of Don. 10, constaining an article of among longth beaution only the proper on the first of Numbers which I did not send till nory heart i the paper on the first of the proper of the proper on the first of gains under pressure attention only two days ago. The extending the send of the contrat, and I was gled to see it treated upon y but, if I am right to not of interest, and I was gled to see it treated upon y but, if I am right to what I bette a agreeties to, and in my remorks thereon, it will be not a light atrange that so agreeties in core about the contrat, and I was gled to see it treated upon y but, if I am right to what I bette a agreeties to one or should have been right to what I bette a agreeties to core about the contrat, and is one right to what I bette a agreeties to core about the description of the core and as about a subject of the first of a nometer of the first of the first of a nometer of the first of a nometer of the first of a nometer of the first of the first of a nometer of the first of a nometer of the first of the first of a nometer of the first o

of all these talact was, thospilors, 15747 of a aquest fact, and the prosesses of the hight, measurement by a macroarial gauge, was expect to 45 in. and the presence of the hight, measurement by a macroarial gauge, was expect to 45 in. and measurement. The forest-th selected brings cont a result of " \$7.903 cubic fact of air discharged per technism." It is then admirered, that " from this amount assure deduction meast to most for creations; that the extensive of the discharged wir is 354 select per boson; and that, with the facustion valuating, and rough such small place, the friction is no doubt stone doubt; that he 18 per cent, from the advantage amount of \$7,913 cavic fout, have \$4.691 cable first, which agrees within a fermion famoly, with the quintity obtained by meson/pasts, " Now, the view () fact with the quantity obtained by memoripated. These, the even which fishs of the figures brought one, and the comments thereto abded, to that a say a minimize a consequence of the motion has been countained. How is at possible, I such ask, that I 6.726 cable field of the draw here the as it passents, I spoid ask, that IE-728 color fast of all, draws been the optimizer and at an pressure test the elementaries, and discovered ander a pressure of 44 in. of correctly, should be engagement to measure. If present one, such to comment to a various of 47 Mill outloo first of greater descript. POREIGN MINES.

UNITED MEXICAN MINES.

Dec. 21.—Periodona.—In the workings of the Mine of Reyes.

Dec. 21.—Periodona.—In the workings of Apostoles the ores are new found principally in the root, and their quality candidates presenting themselves occasionally; and although the one on each side of the presenting themselves occasionally; and although the one on each side of the presenting themselves occasionally; and although the one on each side of the present is side; with the product is soften in industries to open each.

Esta is of good quality, but there is no very evident increase of quantity.—The principal point of lazaren are now comployed by day and ten pair by sight. The very product of ore has averaged big carges.

See Conferenc.—The different points of Pueblic have generally comewhat fallen off in the quality of their product since the last report, and one of the fallen off in the quality of their product since the last report, and one of the poilings has been extracted, to make up the difference. The end on the north-poilings has been extracted, to make up the difference. The end on the north-poilings has been extracted, and in the month productive working of Pueblics, is the heing followed up, and is the month productive working of Pueblics, in the root of Stantings little variation has taken plane; in that of San Hilario the over have failed, and the workame have been removed to an end to the south-over have failed, and the workame have been removed to an end to the south-over have failed, and the workame have been removed to an end to the south-over have failed and of North Burna, are the nout productive points. Prount the plane of San Cayetana the ocusi extraction gots on. The end of San Hilario contains as and of so gond a quality as for many, let the upper part of the loke, on the area not of so gond a quality as for many, let the upper part of the loke, on the area not of so gond a quality as for many, let the upper part of the loke, on the area not of so gond a quality as for many, let the upp

twenty-from pair by night, and the weakly produce has another of one.

Son Miguel.—The principal part of the produce of these workings is extracted from the advanced point of the cross-out where the last narrow body for was found. The quality of the ores is generally of the common class, with some very narrow threshe of a superior kind. The ends to the north-with some very narrow threshe of a superior kind. The ends to the north-was found on the superior of the narrow are made of the particular notice. Because pair of hazamen are supplyed by day, and eight pair by night, and the weekly produce of one has suraged did carges. Besides the above mentioned quantities of ore, the averaged did carges. Besides the above mentioned quantities of ore, the surveyings of the patin has born alm a weakly average for carges. Some good of linate Hone-making the total weakly average for carges. Some good of linate Hone-making the total weakly average for carges. Some good of linate been found in two of the empos in Parisima, worked on joint secount by the beacones.
